Would you take the higher offer?

Buyer A offers

$700,000

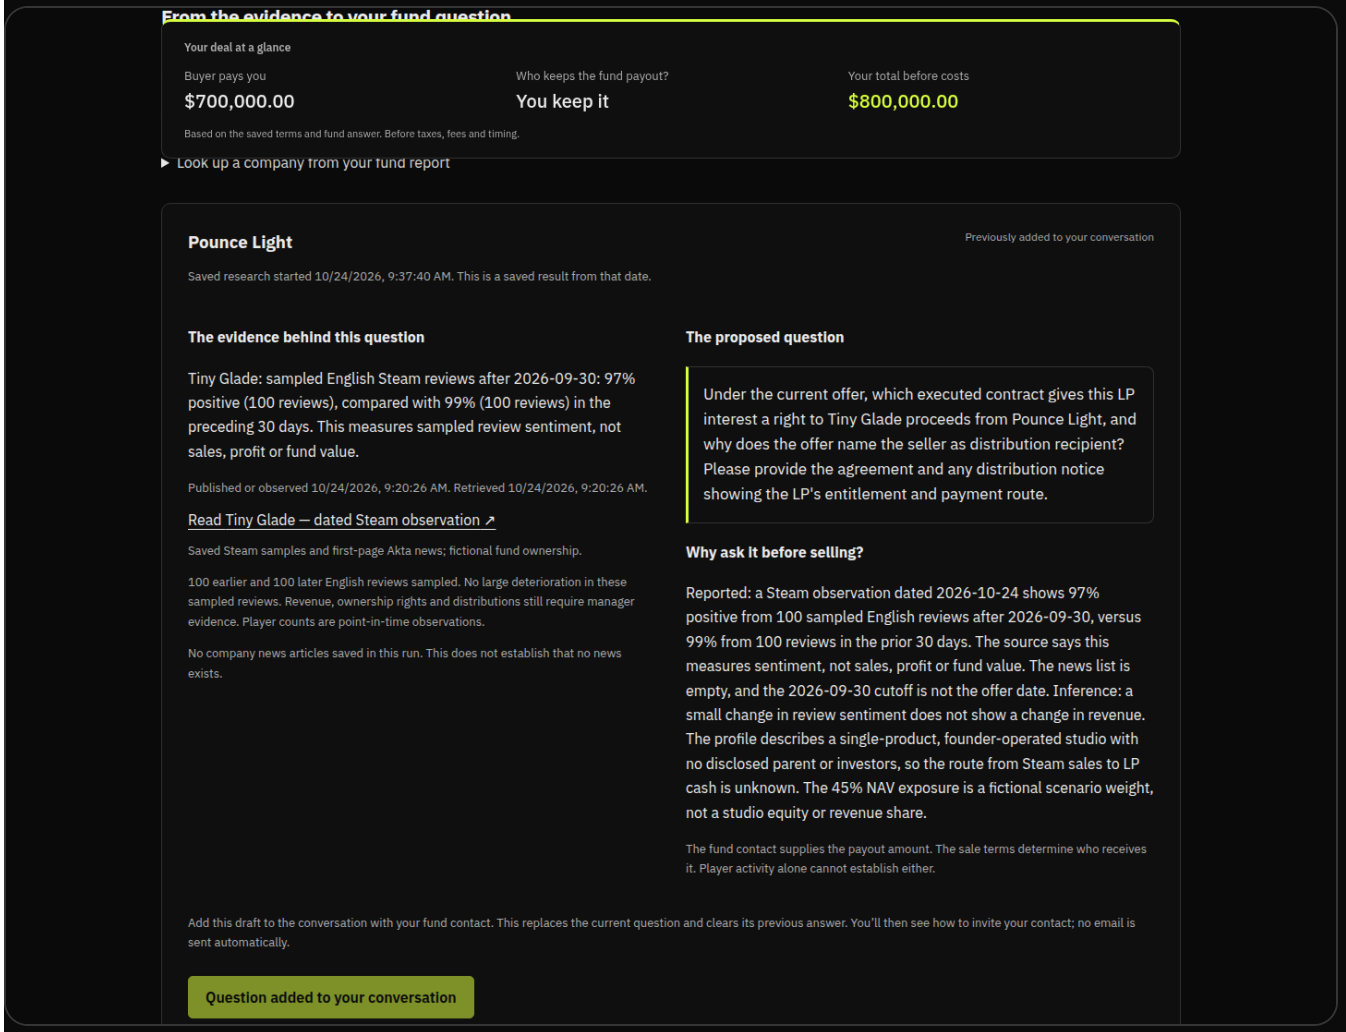

Buyer B offers

$760,000

The price is only part of what you keep.

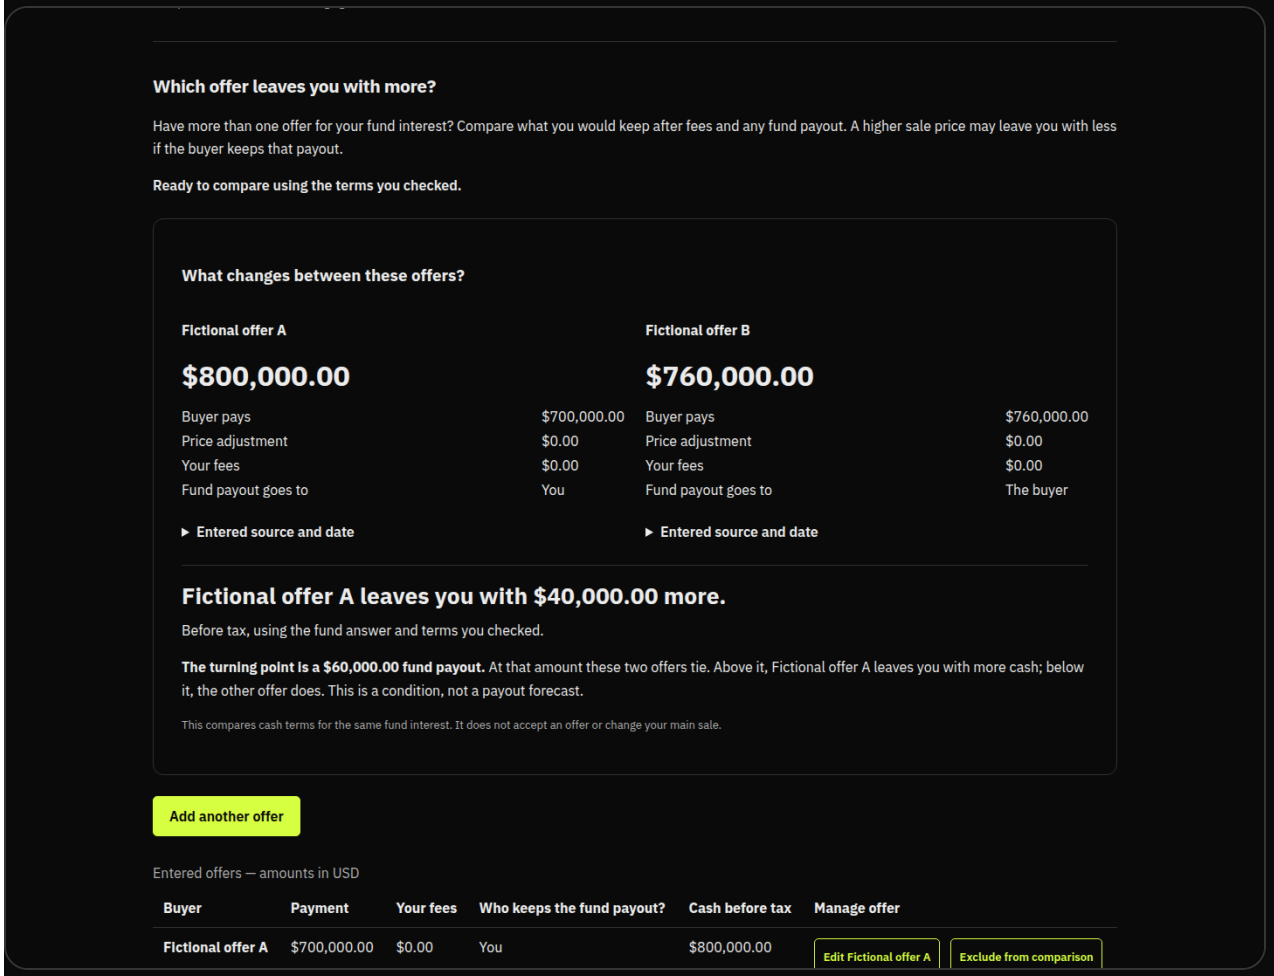

Fictional offers for the same fund interest. The next screens are captures from the working app.

First, who keeps the fund payout?

Captured October 24, 2026 from an isolated example. Real saved outside research; fictional fund, answer and sale terms. Cash comparison before tax.

The lower offer leaves you $40,000 more.

Which offer leaves you with more?

Have more than one offer for your fund interest? Compare what you would keep after fees and any fund payout. A higher sale price may leave you with less if the buyer keeps that payout.

Ready to compare using the terms you checked.

What changes between these offers?

	Fictional offer A	Fictional offer B
	$800,000.00	**$760,000.00**
Buyer pays	$700,000.00	$760,000.00
Price adjustment	$0.00	$0.00
Your fees	$0.00	$0.00
Fund payout goes to	You	The buyer
▸ Entered source and date		

Fictional offer A leaves you with $40,000.00 more.

Before tax, using the fund answer and terms you checked.

The turning point is a $60,000.00 fund payout. At that amount these two offers tie. Above it, Fictional offer A leaves you with more cash; below it, the other offer does. This is a condition, not a payout forecast.

This compares cash terms for the same fund interest. It does not accept an offer or change your main sale.
